

Now anyone can make sweet-smelling whiteprints. Anywhere.

We've made it possible to make whiteprints (blueline, blackline and sepia) and not clear the sinuses of everyone within ten feet.

Our new PD-80 makes prints up to 42 inches wide by any reasonable length. Yet it will fit on a table or desk anywhere in the office. With never a whiff that it was there.

This gives small, but growing architectural or engineering offices the printmaking capacity they need for quick jobs. Like checkprints.

And it provides the size, capacity and quality needed for larger jobs. With do-it-yourself ease and speed that saves the time and expense of going outside for prints.

Anyone can make quality prints with our PD-80. There's no chemical mixing, no warm-up, no daily cleanup.

And no ammonia. Our nose-saving secret is a patented, ammonia-free process.

For full information or a demonstration, write to Market Development Department, 1800 West Central Rd., Mt. Prospect, Illinois 60056. Or call your Bruning representative.

For everything graphic, think Bruning. Your one source of supply for the smallest instruments as well as the largest whiteprinters. And all the rules, scales, curves and supplies in between. A single graphic source for designers, draftsmen, engineers and architects.

BRUNING: A SINGLE GRAPHIC SOURCE
